ASTRO INTERNATIONAL
CLAIM STATISTICS

FREQUENCY	2%
LOSS RATIO	Less than 45%

Claim frequency is defined as the percentage of shipments handled that have claims. The industry average is roughly 20%, meaning that 1 out of every 5 shipments handled will have a claim. The figure of 2% is extremely low and quite remarkable.

Loss ratio is defined as the percentage of dollars spent on claims as opposed to the premium dollars received. An Underwriter considers a net loss ratio of below 80% to be acceptable. A loss ratio figure of less than 45% is exceptional.

Astro International has consistently maintained these wonderful claim figures throughout the last 20 years under our program.
